

Ideation Phase

Brainstorming – Idea Generation – Prioritization Template

Date	25 th July 2026
Project Name	Metro Ticket Booking System

Introduction

As urban populations continue to grow, public transportation systems experience increased passenger traffic every day. Metro rail services have become one of the fastest and most reliable modes of transportation. However, the ticket booking process at many metro stations still involves manual interactions, long queues, and delays during peak hours.

The brainstorming session was conducted to identify real-world transportation problems. After careful evaluation, the Metro Ticket Generation System was selected as the most impactful and practical solution.

Objective

The objective of this brainstorming session is to identify transportation-related problems, generate multiple solution ideas, evaluate them, and select the most feasible and impactful project for development using ServiceNow.

- Identify common transportation-related challenges faced by commuters.
- Develop a solution that demonstrates automation, workflow management, and digital transformation.

Problem Areas Identified

- The goal was to encourage creativity and ensure that no idea was rejected during the initial discussion.
- Several concepts were proposed, including digital ticketing, smart parking, automated bus pass management, and railway reservation systems.

Domain	Existing Problem
Metro Transportation	Long ticket queues
Railway	Manual reservation process
Bus Transport	Paper tickets and pass management
Airport	Lengthy check-in process

1. BRAINSTORMING

OBJECTIVE
To identify transportation-related problems, generate multiple solution ideas, evaluate them and select the best idea to implement.

BRAINSTORMED IDEAS

IDEA	DESCRIPTION
 Metro Ticket Generation System	QR-based digital metro ticket booking and verification.
 Smart Parking System	Online parking space reservation and management.
 Digital Bus Pass Management	Online bus pass generation and renewal system.
 Railway Seat Availability Tracker	Live seat availability and alerts for passengers.
 Smart Toll Collection System	Automatic toll payment using RFID / QR.

IDEA PRIORITIZATION (Evaluation Matrix out of 5)

IDEA	INNOVATION	FEASIBILITY	USER DEMAND	SCALABILITY	TOTAL (out of 25)
Metro Ticket Generation System	5	5	5	5	25
Smart Parking System	4	4	3	4	19
Digital Bus Pass Management	3	4	4	3	17
Railway Seat Availability Tracker	4	3	4	3	17
Smart Toll Collection System	3	3	3	3	15

SELECTED IDEA

METRO TICKET GENERATION SYSTEM

Reasons for Selection:

- ✓ High user demand and real-world impact
- ✓ Solves major pain points of daily commuters
- ✓ Feasible to implement with ServiceNow
- ✓ Scalable for future enhancements

Brainstormed Ideas

Each idea was evaluated based on:

- Technical complexity
- Availability of ServiceNow features
- User demand
- Future scalability
- Development time
- Innovation level

Idea	Description
Metro Ticket Generation System	QR-based digital metro ticket booking
Smart Parking System	Reserve parking spaces online
Digital Bus Pass	Online bus pass generation
Railway Seat Availability Tracker	Live seat availability
Smart Toll Collection	Automatic toll payment

Evaluation Matrix

After comparing all proposed ideas, the Metro Ticket Generation System was selected because it addressed a genuine public problem while making effective use of ServiceNow capabilities such as Service Catalog, Flow Designer, Notifications, ..

Criteria	Metro Ticket	Smart Parking	Bus Pass
Innovation	5	4	3
Feasibility	5	4	4
User Demand	5	3	4
Scalability	5	4	3
Automation Potential	5	4	3
Total	25	19	17

Selected Idea: Metro Ticket Generation System

Reason for Selection

- It impacts millions of commuters daily.
- Existing ticketing systems still involve manual processes.
- There is significant scope for automation.
- The solution can improve both passenger convenience and operational efficiency.
- It provides opportunities to integrate future technologies such as AI, IoT, and digital payments.

Expected Benefits

For Passengers

- Faster ticket booking
- Reduced waiting time
- Digital ticket storage
- Easy booking history
- Contactless travel

For Metro Administration

- Reduced operational workload
- Better passenger management
- Improved revenue tracking
- Centralized ticket database
- Automated reporting
