

Ideation Phase

Defining the Problem Statement

Date	25 th July 2026
Project Name	Metro Ticket Booking System

Pain Points

Urban metro systems serve thousands of commuters every day. Existing ticket booking methods often require passengers to wait in long queues, resulting in delays and congestion during peak hours. Manual ticketing also increases operational effort and the possibility of ticket loss.

Problem Statement

Passengers face inconvenience due to manual ticket purchasing, lengthy queues, paper-based tickets, and slow fare processing. Metro authorities require an automated solution that enables quick ticket booking, automatic fare calculation, QR-based verification, and digital record management.

Existing System & Problems In It

Existing System

- Long waiting time
- Ticket loss
- Manual fare calculation
- High manpower requirement
- Slow ticket verification
- Poor passenger experience

Problems in Existing System

- Manual ticket counters
- Smart card recharge counters
- Long queues
- Time-consuming verification

Proposed Solution

Develop a “**ServiceNow-based Metro Ticket Generation System**” that enables users to:

- Select source and destination stations.
- Automatically calculate fare.
- Generate digital QR-based tickets.
- Receive instant booking confirmation.
- Maintain ticket history.

Objectives

- Reduce ticket booking time.

- Improve passenger convenience.
- Enable contactless ticket verification.
- Digitize metro ticket management.
- Improve operational efficiency.

Scope

- Passenger booking portal
- QR ticket generation
- Fare calculation
- Notifications
- Booking history
- Admin dashboard
