

Project Design Phase Solution Architecture

Date	26 JUNE 2026
Project Name	Metro Ticket Booking System
Maximum Marks	4 Marks

Solution Architecture:

The **Metro Ticket Booking System** is a digital ticket management solution that automates the metro ticket booking process. It bridges the gap between passengers and metro services by providing an efficient, secure, and paperless ticketing platform. The architecture focuses on integrating user interaction, fare calculation, QR code generation, and secure data management within the ServiceNow platform.

Its goals are to:

- Provide a simple and secure online metro ticket booking system.
- Automatically calculate ticket fares based on the selected source and destination stations.
- Generate a unique QR Code for every booked ticket.
- Store booking details securely in the **Metro Ticket Booking** table.
- Reduce waiting time at ticket counters through digital ticketing.
- Support paperless and contactless metro travel.
- Enable easy management of bookings through ServiceNow workflows.
- Provide a scalable solution that can be extended with online payments, notifications, and real-time metro services.
